CLOUD-BASED APIS AND DEFENSE IN REAL-TIME

Overview

One of our prospects who deals with a few of the leading healthcare providers and hospitals globally required a security solution that could provide both visibility into their cloud-based APIs and defense in real-time.

It is reported a significant increase in medical breaches in the last few years. They also expected a solution that could meet their HIPAA compliance requirements as well as secure their cloud-based web services. Without the security of IT systems and web applications, the medical facilities are considered incomplete.

The Challenges that they experienced

Healthcare is as one of the most important industries in the world. For such a company software is deployed all the time, Prophaze can be tightly integrated with the development and deployment process. The organization finds itself right in the middle as a service provider to medical establishments and needed security that works in real-time.

The Results

This organization relies on Prophaze to identify and block malicious threats as well as provide deep visibility across all their web services.

- Offers WAF protection to sensitive information from the offenders.

- Help you to do inbound/outbound content analysis, compliance, and powerful policy configuration into a single solution.

- Enhanced security against malicious activities

- Up-to-date on securing itself against IP offenders and they are automatically blocked.

- The protection is much easier, better, and scalable.
